

ELEVATE YOUR PAVEMENT PERFORMANCE

from the bottom up

There's a new way to extend the life of longitudinal joints. After extensive testing,

J-Band® is the proven innovation that dramatically reduces the age-old problem of longitudinal joint deterioration. Here's what makes it so special:

Efficient Application

Even though it's a new way of doing things, J-Band is applied immediately prior to paving, as part of the normal HMA construction process. Using J-Band now prevents required maintenance later.

Wide Coverage

Using an inline parallel spray bar, J-Band covers an area 12 or 18 inches wide on top of existing pavement and under the eventual location of the longitudinal joint.

Fast Acting

In no more than 30 minutes after applying J-Band, the road is ready for construction traffic, keeping the installation process efficient and traffic flowing.

Upward Moving

Unlike other joint treatments, J-Band migrates upward, filling voids and fending off the joint's enemies: air and water.

Long Lasting

J-Band is proven to extend the life of your pavement's longitudinal joint three-fold, from the usual 4-5 years *without* J-Band — to 15+ years *with* J-Band.

Long Lasting

J-Band is a long-term proposition. On the average roadway, every \$1 invested in J-Band typically saves agencies \$2 in avoided and deferred maintenance costs.

Proven Performance: J-Band has been successfully installed with proven results on roads throughout Illinois as well as Ohio, Indiana, Michigan, Iowa, and Missouri. Using J-Band helps save what matters most: time, money, and lives. To see this game-changing pavement preservation in action, visit www.TheJointSolution.com
